Career Objective

Computer Science student at the Egyptian Chinese University with hands-on experience building **AI and machine learning systems** across computer vision, recommendation systems, predictive analytics, and explainable AI. Experienced in developing end-to-end ML pipelines and interactive AI applications using Python and modern ML frameworks. Strong interest in **Artificial Intelligence, Machine Learning, Deep Learning, and practical AI engineering**.

Education

Egyptian Chinese University (ECU)

Expected Graduation: 2027

Bachelor of Computer Science and Information Technology

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Machine Learning

Experience

Flight Delay Prediction using Machine Learning

- Developed an end-to-end machine learning system for predicting flight delays from historical aviation data using multiple classification models.

Tools: Python, Scikit-learn, Pandas, NumPy

Real-Time Movie Recommendation System

- Developed a real-time recommendation platform that processes user interactions and delivers personalized movie recommendations through an event-driven architecture.

Tools: Python, Kafka, Redis, FastAPI, Streamlit, Docker

Courses & Certificates

Artificial Intelligence & Machine learning Diploma

Route Academy, Egypt

Technical Skills

Programming: Python, C++, SQL

Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms

AI & Machine Learning: Machine Learning, Deep Learning, Computer Vision, Transfer Learning, Explainable AI, Recommendation Systems

Frameworks & Tools: TensorFlow, Scikit-learn, OpenCV, FastAPI, Streamlit, Kafka, Redis, Docker, Git, GitHub

Projects

Brain Tumor Classification & Visualization

GitHub

- Developed an attention-enhanced deep learning system for brain MRI classification with visual explanations to improve model interpretability.

Tools: Python, TensorFlow, ResNet50, OpenCV, Grad-CAM, Streamlit

Agentic Customer Intelligence Platform

- Designed an AI-driven customer intelligence platform for analyzing customer behavior and supporting data-driven insights through a modular architecture.

Tools: Python, Scikit-learn, SQLite, SHAP, SARIMA

Object Tracking System

GitHub

- Developed a computer vision system for detecting and tracking moving objects in video streams using background subtraction and contour-based detection.

Tools: Python, OpenCV, NumPy, Streamlit
